As a global corporate citizen, we are committed to addressing the environmental impacts generated through our business. Reducing our environmental footprint is not only the right thing to do; it also supports the sustainability of our business.

This environmental statement is intended to guide the actions of Liberty Global management, employees, and suppliers in achieving our environmental objectives. It supports our program of environmental activities across the business and outlines our approach to environmental management, focusing on the three strategic environmental priorities identified as material to our business.

**Strategic environmental priorities:**

1) Energy efficiency:
Good business practice and environmental management come together in resource efficiency, particularly in the energy that we use to operate our networks. As such, we seek to drive energy efficiency initiatives in all our markets and aim to reduce our consumption of other natural resources where possible.

2) Greenhouse gas (GHG) emissions:
We actively work to reduce our emissions by carefully measuring our direct and indirect GHG emissions (according to the GHG Protocol), increasing our energy efficiency and procuring renewable energy. We committed to a science-based target to achieve net zero carbon emissions for Scopes 1 & 2 by 2030. We also strive to deliver smarter solutions and products for our customers that help them minimize their energy use and carbon footprint.

3) Managing e-waste:
Our business relies on the supply of electronic hardware (set-top boxes and modems) to customers. We ensure that we share responsibility for the safe and environmentally friendly handling of these products when they reach end-of-life, collecting equipment from our customers and refurbishing whenever possible. Where obsolete equipment cannot be refurbished, we ensure disposal according to the Waste Electrical and Electronic Equipment (WEEE) Directive.
In addition to our three environmental priorities we are actively addressing the following issues:

**Working with suppliers**

We are committed to building a responsible supply chain and ensuring that suppliers are aware of our values and environmental objectives through our Responsible Procurement and Supply Chain Principles and EcoVadis assessment platform.

**Monitoring, management and communication**

We strive to manage our environmental impacts through a robust process of measurement, analysis, target setting and impact reduction plans. Our environmental data is recorded on the CRedit360 non-financial data collection platform, and we produce an annual Corporate Responsibility (CR) Report to document our progress, in accordance with the Global Reporting Initiative Guidelines.

In each of our three key focus areas – energy efficiency, greenhouse gas emissions, and e-waste, we monitor incremental progress on an annual basis. Further details on our progress can be found in our annual Corporate Responsibility Report.
